Updated Projection of Yearend Strength

Events during May supported a projection of achieving ceiling by yearend. The expected upturn in EODs was achieved and attrition continued at an abnormally low level. It seems likely that June will record the necessary level of EODs but SPD would be happier with a higher level of applicants in process to assure the necessary strong windup during August and September.

25X1 Strength increased [] during May and reached [] against a projection
25X1 of [] so we are definitely on track. 25X1

25X1 With respect to the Directorates, DDS&T continues to gain strength at a
25X1 significant rate and we now project that it will be [] above ceiling at yearend. 25X1
At the end of May, NFAC was [] below its augmented ceiling and has been slow to
begin the necessary climb. SPD has been in conversation with the Directorate
about measures to speed the flow.
